Where Technology is a Way of Life

DynoValve Kit

**INCREASED FUEL EFFICIENCY
DECREASED EMISSIONS**

TECH TIP

MAKE	MODEL	ENG.	YEAR
Chevrolet	Tahoe	4.8L	2002-2010
	1500 PU		
	Silverado	5.3L	
	Express Van	6.0L	
	Hummer H2		

The Valve Cover on these engines includes a Splash Plate on the underside, designed to keep oil away from the suction of the OEM PCV Valve. This design, however, allows excessive splash to collect and move toward the suction side of the PCV Valve when there are high demands for engine power. The DynoValve, which works best in these demanding situations, has a tendency to suck up the excess collected oil and burn it with the blowby fuel. For this reason, DynoValve recommends drilling Drain Holes in the Splash Plate to allow oil to drain more readily (see graphic) This modification allows the DynoValve to provide the high performance required by these engines
